DSG Style Number/ GXS Style Number –

The alpha numeric code used by a vendor to refer to a group of similar selling SKUs. May consist of a single selling SKU or multiple SKUs, see the below table for an example.

If your GXS Active Catalogue Product level is set up COLOR-SPECIFIC, you will need to supply a style number/identifier in the Style Number field that applies to all colors/sizes for that particular style. If your GXS Active Catalogue Product Level identifies all colors/sizes for a particular product then the same value should be entered into the Style number.

The below table details an example of the coding required by DSG for the Style Number attribute. The table contains 8 separate SKU's that all belong to the same Style Number. The difference between the 8 SKU's is either size or colour BUT their Style Number stays the same.

The sample Style Number value highlighted below is an example of the value required to be coded into the Style Number attribute.

Category	DSG Style Number	Description	Article #	Size	Color
Running Top	EXAMP13034A	FLEECE HOOD	BL62628	S	Black
Running Top	EXAMP13034A	FLEECE HOOD	BL62629	M	Black
Running Top	EXAMP13034A	FLEECE HOOD	BL62630	L	Black
