

Production Environment Data Exchange Platform (DXP) Certificate Installation Instructions

The accompanying file is the tp1.forestexpress.com security certificate in .crt format. You may double click on the certificate and use the “Copy to File” option in the “Details” tab to convert the certificate to whichever format your B2B integration server currently uses or requires.

FILENAME: [dacb284ab068da8e.crt](#)

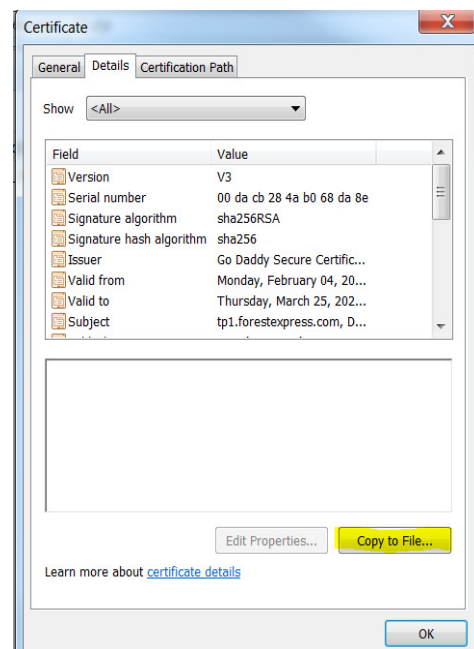

FORMAT: Base-64 encoded X.509

The Go Daddy root and intermediate certificates that were used to sign this certificate are provided below and will be needed if your B2B integration server does not already have a current version of these certificates from Go Daddy.

If you would prefer to retrieve these certificates directly from Go Daddy, then visit the following URL:
<https://certs.godaddy.com/anonymous/repository.pki>

FILENAME: [gd_bundle-g2-g1.crt](#)

FORMAT: Base-64 encoded X.509

In most cases the new certificates can be staged on your B2B integration server prior to the expiration date of the current certificate. Once your integration server is restarted the new the new certificate will take effect.

If you have any questions or if you need additional information, please contact Liaison Support by telephone at 1-866-830-3600 option 4 or by emailing support@liaison.com.
